Queue Control Suite

A complete system to monitor, predict, and control checkout performance in real time, with standardised actions and measurable outcomes across stores.

Complete checkout control

A packaged operational system combining live monitoring, demand prediction, staff actions, and performance tracking. Designed to standardise checkout execution and remove variability across stores and peak periods.

%20info%20and%20pricing.%20Thanks!)

Live Queue Control

Monitor queue length, waiting time, and service rate across all checkout points, including self-checkout. Clear thresholds highlight overload conditions and trigger alerts, ensuring immediate visibility without interpretation or manual estimation.

Queue Monitoring Dashboard

Next 15 Min Forecast ⓘ				
Time	Incoming	Required	Current	Gap
18:15	120	4	2	-2
18:20	140	5	3	-2
18:25	110	4	4	0
Recommendation: Open 2 counters NOW.				

Demand Prediction

Forecast incoming customer flow and expected queue build-up over the next 15 minutes. Calculate required checkout capacity based on real-time traffic patterns and average visit duration.

Store A i

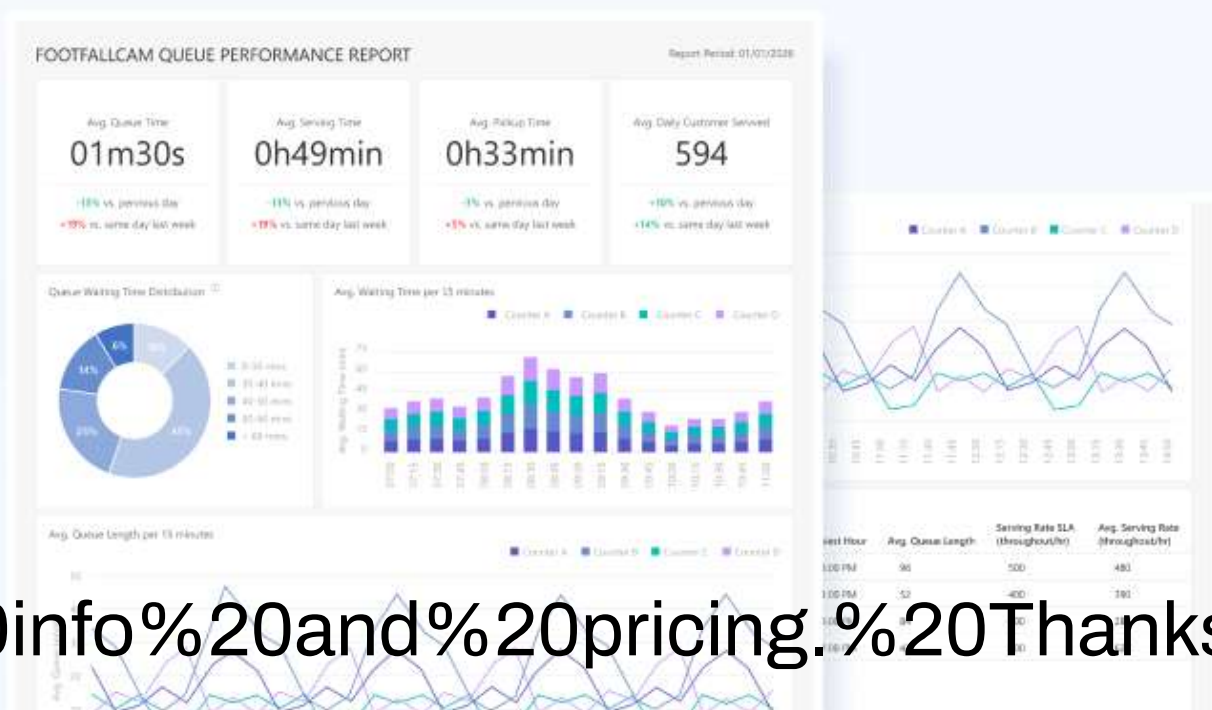

Time: 18:15

Lane	Queue	Wait	Service	Status
01	12	6.2m	1.8/min	● Overload
02	8	4.1m	2.0/min	● Rising
03	3	1.5m	2.5/min	● OK
SCO	15	7.0m	1.2/min	● Overload

Recommendation: Open 2 counters | Deploy 1 staff.**Forecast:** 18:30 surge +25%

Operational Actions

Provide direct, actionable recommendations such as opening more counters, reallocating staff, or balancing load between lanes. Instructions are simple, standardised, and aligned with current store conditions to ensure consistent operational efficiency at all times.

%20info%20and%20pricing.%20Thanks!)

Management Analysis

Evaluate queue conditions, service efficiency, and operational compliance to identify macro-level gaps. Analyse performance across stores and time periods, benchmark branches, quantify lost sales from waiting time, and assess staff deployment effectiveness to drive consistent service efficiency and improvement.

Operational Scenarios

Case Study

Peak hour stabilised

Case Study 1
%20info%20and%20pricing.%20Thanks!)

Peak hour stabilised

Store size

8,500 sq ft supermarket · mall-based · 6 staffed lanes + 6 self-checkout kiosks

Peak hour issue

Queues exceeded 6–8 minutes between 5:30pm–7:30pm. Counters were opened late, and staff allocation varied daily. Self-checkout congestion was frequent.

Deployment scope

Queue Control Suite deployed across all checkout points. Real-time monitoring, 15-minute prediction, and standardised action thresholds enabled.

No ongoing calibration cycles were introduced. Monitoring focused on device and data-pipeline health, not behavioural variance. After acceptance, no internal team was formed and no new operational role was created.

Measured improvement

Average waiting time reduced from 6.5 minutes to 3.2 minutes. Peak-hour queue spikes reduced by 40%. Staff response time improved, with counters opened earlier and more consistently.

Self-checkout balanced

Multi-store standardised

FAQs

Learn More →

%20info%20and%20pricing.%20Thanks!)
Does this work with self-checkout? ^

Yes. The system monitors both staffed and self-checkout lanes, measuring queue conditions and balancing load between them to ensure consistent service performance across all checkout types.

How accurate is prediction?

How is staffing recommendation calculated?

Can it integrate with existing CCTV?

How long to deploy?

Deployment Examples

Selecting the appropriate functions and devices to serve your specific purpose is crucial. To get started with your own designs, it can be helpful to review deployments of similar systems in other malls for inspiration.

Talk to an Expert

Talk to one of our FootfallCam consultants to identify your requirements, budgets, and possibly conduct a Proof of Concepts, to help ensure that FootfallCam system is the right fit for your mall.
